SUMMARY

Unity Game Developer with hands-on experience across 2D, 3D, and WebGL projects, including a production mobile solitaire title at Infocom Software and multiple freelance Unity 3D prototypes delivered end-to-end for clients. Strong in C# gameplay systems, game AI (Minimax), vehicle physics, animation systems, and performance debugging (UI bottlenecks, memory leaks, GUID conflicts). Seeking a full-time Unity Developer or Gameplay Programmer role.

CORE SKILLS

Engine and Tools: Unity 2D/3D, Unity UI (uGUI), Animator, Timeline, DOTween, Unity Profiler, Git, GitHub, Unity Collab, Visual Studio

Programming: C#, Object-Oriented Design, ScriptableObjects, Coroutines, Finite State Machines, Event-Driven Architecture

Gameplay Systems: Game AI, Minimax Algorithm, Enemy AI, Pathfinding, Vehicle Physics, Rigidbody, Wheel Colliders, Physics and Collision Tuning, Object Pooling, Addressables

Delivery: WebGL Deployment, Mobile Game Development, Particle VFX, Playtesting, Mobile AR Fundamentals, Client Communication (Discord, Google Docs)

PROFESSIONAL EXPERIENCE

Associate Game Developer | Infocom Software Private Limited Nov 2025 - Apr 2026

Kochi, Kerala | Full-time

- Owned the full animation layer of a solitaire mobile game end-to-end, from prototype to submission-ready builds, within a multidisciplinary production team.
- Ran structured playtesting sessions each sprint to catch game feel issues, animation timing bugs, and UX inconsistencies before QA, reducing later rework.
- Diagnosed and resolved UI performance bottlenecks, memory leaks, and asset GUID conflicts in a version-controlled, multi-developer environment.
- Mentored junior developers on Unity architecture, ScriptableObject workflows, and C# conventions.
- Delivered a technical workshop on Unity game development at MES College of Engineering and Technology.

Freelance Unity Developer | Self-Employed May 2026 - Present

Remote

- Designed, built, and delivered Unity 3D prototypes for independent clients across genres (courier simulators, puzzle games, arcade titles), managing each project end-to-end.
- Tuned player movement, physics, and collision response to match each client's target game feel and platform constraints.
- Handled client communication, feedback cycles, and iterative build delivery independently via Discord and Google Docs.

SELECTED PROJECTS

Chess with Adaptive AI (Minimax) | Unity, C#, Game AI, DOTween, WebGL

Play: devfaisaln.itch.io/chess

- Built a complete chess game with full move validation and timer management, with three selectable AI difficulty tiers: Random, Heuristic, and Minimax.
- Implemented Minimax decision-making with heuristic board scoring on a board-matrix representation.
- Added DOTween-driven piece animations and a centralized Audio Manager for contextual sound feedback; deployed as a playable WebGL build.

City Rider - 3D Motorcycle Simulator | Unity 3D, C#, Vehicle Physics, WebGL

Play: devfaisaln.itch.io/city-rider

- Engineered a custom two-wheeled vehicle controller with balance and gyroscopic stabilization using Rigidbody physics and Wheel Colliders.
- Implemented speed-scaled lean angles and dynamic camera damping for responsive, natural handling in an open 3D city environment.
- Tuned wheel collider friction to achieve realistic traction, drift, and braking behavior; deployed as a playable WebGL build.

Additional Projects: Spider Solitaire (card architecture, DOTween), Asteroids Arcade (Newtonian physics, object pooling), AI XOX (Minimax), FPS Survival Shooter (enemy AI, raycasting). Full list on portfolio and itch.io.

EDUCATION

Diploma in Unity Game Development | Big Boy School of Gaming, Kochi Oct 2024 - Apr 2025

- Coursework in Unity 2D, Unity 3D, and C# gameplay architecture, with multiple shipped student projects.

B.Com in Computer Applications | University Institute of Technology, Kollam In Progress
